

## Factsheet #3 : Evaluating IoT Platforms adoption activities

Unify-IoT project developed a method for assessing the maturity (level) of IoT Platforms and their adoption for identifying the “best practices” implemented and “barriers” met by IoT Platforms stakeholders.

### What is the ‘Maturity Assessment Model’?

IoT platforms ecosystems maturity evaluation framework provides an understanding of strengths and weaknesses of an IoT platforms ecosystem and its adoption readiness by different ecosystem participants.

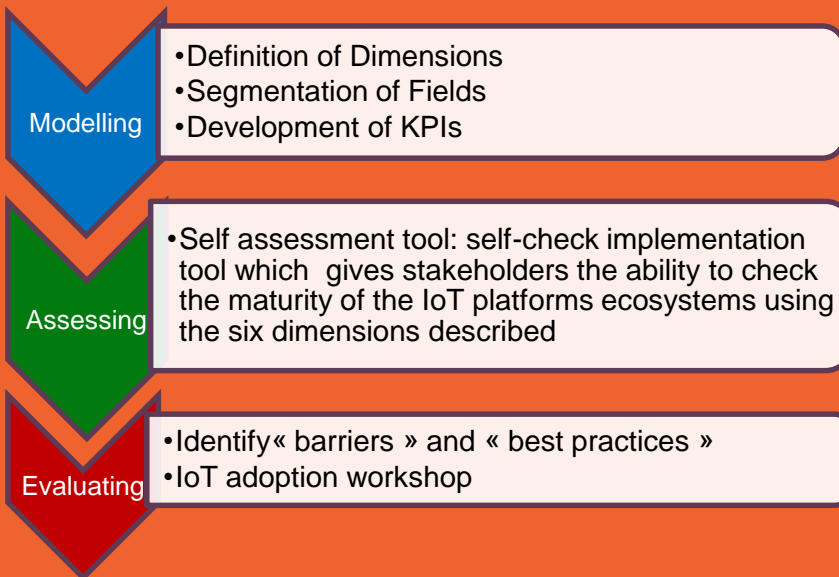

#### Maturity Assessment Methodology:

Define criteria through which IoT innovation platforms will classified themselves into level of readiness:

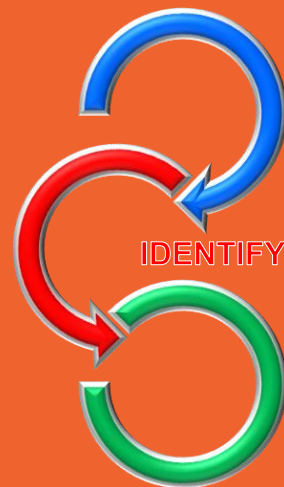

- Outsider
- Beginner
- Intermediate
- Experienced/Top performer
